PROFESSIONAL SUMMARY

Java Backend Developer with practical experience in Spring Boot, PostgreSQL, REST APIs, Postman, and testing workflows. I also work with React/Next.js basics and AI-assisted development tools to deliver small business websites, API modules, admin dashboards, and automation/testing tasks faster and more reliably.

CORE SKILLS

Backend: Java, Spring Boot, REST APIs, JPA/Hibernate, JWT authentication, validation, PostgreSQL

Testing: Postman API testing, manual testing, Selenium, Cucumber, Playwright basics, bug reports, test reports

Frontend & Tools: React basics, Next.js basics, Tailwind CSS, MERN basics, Git, GitHub, Codex, Gemini

FREELANCE SERVICES

- Business Websites: Responsive websites with service sections, contact forms, WhatsApp CTA, basic SEO, and deployment.
- Backend API Development: Spring Boot API modules with database design, CRUD operations, validation, authentication, and Postman documentation.
- Admin Dashboards: Dashboard screens for customers, products, orders, status management, reports, search, filters, and forms.
- Testing & Automation: Postman collections, website/API testing, automation scripts, screenshots on failure, and test execution notes.
- Small Business Tools: Invoice generators, report generators, form-to-email flows, CSV/Excel utilities, and FAQ-style tools.

RELEVANT EXPERIENCE

Backend Development & Testing Work | Java, Spring Boot, PostgreSQL, Postman, Testing

- Worked on backend-oriented application flows involving controllers, services, repositories, DTOs, database-backed APIs, and validation-focused development.
- Used Postman for API testing, request validation, protected API verification, and checking end-to-end business flows.
- Worked with testing/automation concepts including Selenium, Cucumber, Playwright basics, screenshots on failure, and structured reporting.
- Understands enterprise-style workflows from a Core Banking System project, including customer, account, loan, transaction, approval, document, and admin-related modules.

PORTFOLIO PROJECTS

Current portfolio projects are in development and will be linked with live demos and GitHub repositories after completion.

- Business Website - responsive landing page with services, FAQ, contact form, WhatsApp button, and deployment.
- Spring Boot API System - authentication, CRUD APIs, PostgreSQL, validation, JWT, and Postman collection.
- Admin Dashboard - customer/product/order management UI with search, filters, forms, and backend API integration.
- Testing Automation Framework - important user-flow tests with reports and screenshots on failure.

WORK APPROACH

- Start with a clear requirement and a small milestone instead of overpromising a large project.
- Plan the feature, build cleanly, test important flows, and share clear delivery notes.
- Use AI tools to speed up development while still reviewing, understanding, and testing the final output.

EDUCATION

Education details can be added before final client sharing if you want to include degree, college, and year.
